

NEXT UP – Smart Career Pathway & University Recommendation System Flowchart

PROJECT TITLE: NEXT UP(Career Pathway System)

PROJECT DESCRIPTION :

NEXT UP – Smart Career Pathway & University Recommendation System is a Python-based academic guidance application designed to help students in Pakistan make informed educational and career decisions from FSc (Intermediate) level through Bachelor's and MS programs. The system evaluates a student's academic background along with a personality-based interest assessment to recommend suitable career paths, universities, and scholarship opportunities both in Pakistan and internationally.

PURPOSE OF THE PROJECT

The main purpose of NEXT UP is to reduce confusion among students when choosing academic streams and career directions. Many students struggle with selecting the right field after matric or intermediate due to lack of guidance, limited awareness of career options, and mismatch between interests and academic backgrounds. This system solves that problem by combining academic data and personality evaluation to provide personalized, data-driven recommendations. It also highlights eligibility constraints, helping students understand realistic pathways based on their performance and subject choices.

MAIN FEATURES OF THE SYSTEM

- **Career Interest Assessment (Personality Quiz):**
A structured quiz that evaluates student interests in five major domains: Pre-Medical, Pre-Engineering, Commerce, Arts, and ICS (Computer Science). It calculates scores based on user responses and identifies the most suitable career track.
- **Academic Background Analysis:**
The system considers whether the student is from Matric Science, Arts, Pre-Medical, Pre-Engineering, ICS, or Commerce, and aligns recommendations accordingly.
- **Career Path Recommendations:**
Suggests relevant FSC-level career directions, bachelor's degrees, and MS/M.Phil programs based on the selected field.
- **University Suggestions (Pakistan & Global):**
Provides a curated list of top universities in Pakistan and internationally for each career pathway.
- **Scholarship Guidance:**
Displays relevant international scholarship opportunities such as Fulbright, Chevening, DAAD, and Erasmus Mundus.
- **Eligibility & Mismatch Detection:**
Identifies academic mismatches (e.g., switching from Arts to Medical/Engineering) and informs students about realistic limitations and alternative routes.
- **Performance-Based Filtering:**
Recommends global universities only if the student meets minimum academic thresholds (FSc percentage or CGPA requirements).

CONCLUSION

NEXT UP acts as a smart academic advisor that bridges the gap between student interests and real-world academic requirements. It provides a structured, interactive, and personalized pathway for students to confidently plan their future education and career with clarity and direction.
